**SAMPLE Occupations Relating to This Pathway**

- Assembler
- Automated Manufacturing Technician
- Calibration Technician
- Electrical Installer and Repairer
- Electromechanical Equipment Assembler
- Extruding and Drawing Machine Setter/Set-Up Operator
- Foundry Worker
- Grinding, Lapping, and Buffing Machine Operator
- Hand Packer and Packager
- Hoist and Winch Operator
- Instrument Maker
- Large Printing Press Machine Setter and Set-Up Operator
- Machine Operator
- Medical Appliance Maker
- Micro and Nano Fabrication Technicians
- Milling Machine Setter and Set-Up Operator
- Millwright
- Pattern and Model Maker
- Precision Layout Worker
- Sheet Metal Worker
- Solderer and Brazier
- Tool and Die Maker
- Welder

Project funded by the U.S. Department of Education (VO51B020001)
Creating Your Institution’s Own Instructional Plan of Study

With a team of partners (secondary/postsecondary teachers and faculty, counselors, business/industry representatives, instructional leaders, and administrators), use the following steps to develop your own scope and sequence of career and technical courses as well as degree major courses for your institution’s plan of study.

1. Crosswalk the Cluster Foundation Knowledge and Skills (available at http://www.careerclusters.org/goto.cfm?id=94) to the content of your existing secondary and postsecondary programs/courses.

2. Crosswalk the Pathway Knowledge and Skills (available at http://www.careerclusters.org/goto.cfm?id=60) to the content of your existing secondary/postsecondary programs and courses.

3. Based on the crosswalks in steps 1 and 2, determine which existing programs/courses would adequately align to (cover) the knowledge and skills. These programs/courses would be revised to tighten up any alignment weaknesses and would become a part of a sequence of courses to address this pathway.

4. Based on the crosswalks in steps 1 and 2, determine what new courses need to be added to address any alignment weaknesses.

5. Sequence the content and learner outcomes of the existing programs/courses identified in step 3 and new courses identified in step 4 into a course sequence leading to preparation for all occupations within this pathway. (See list of occupations on page 1 of this document.)

6. The goal of this process would be a series of courses and their descriptions. The names of these courses would be inserted into the Career and Technical Courses column on the Plan of Study on page 1 of this document.

7. Below is a sample result of steps 1-6, and these course titles are inserted into the Plan of Study on page 1 of this document.

8. Crosswalk your state academic standards and applicable national standards (e.g., for mathematics, science, history, language arts, etc.) to the sequence of courses formulated in step 6.
SAMPLE Sequence of Courses for

Below are suggested courses that could result from steps 1-6 above. However, as an educational institution, course titles, descriptions and the sequence will be your own. This is a good model of courses for you to use as an example and to help you jump-start your process. Course content may be taught as concepts within other courses, or as modules or units of instruction.

The following course is based on the Cluster Foundation Knowledge and Skills found at http://www.careerclusters.org/goto.cfm?id=94. These skills are reinforced through participation in student organization activities.

#1
Introduction to Manufacturing Occupations: This course provides students an opportunity to experience various professional organized skill areas. These experiences are designed to be similar to occupations actually existing in the commercial/industrial workplace. This may be taught as a career exploration course in conjunction with other foundation Career Cluster courses.

The following course is based on the Cluster Foundation Knowledge and Skills as well as the Pathway Knowledge and Skills found at http://www.careerclusters.org/goto.cfm?id=60. These skills are reinforced through participation in student organization activities.

#2
Information Technology Applications: Students will use technology tools to manage personal schedules and contact information, create memos and notes, prepare simple reports and other business communications, manage computer operations and file storage, and use electronic mail and Internet applications to communicate, search for and access information.

The following courses expose students to Pathway Knowledge and Skills found at http://www.careerclusters.org/goto.cfm?id=60 and should include appropriate student activities.

#3
Employment in Manufacturing Occupations: Students will study the roles and responsibilities of various occupations related to manufacturing. Students will research available sources to acquire knowledge of how to maintain a safe and productive workplace including following local, federal and company regulations to perform environmental and safety inspections. Students will develop strategies for communicating with coworkers and/or external customers to ensure production meets business requirements and learn strategies for maintaining equipment, tools and workstations. A work-based learning component is encouraged.

#4
Applications in Manufacturing Technology: This course prepares students for careers in manufacturing and for postsecondary education. The main focus is a core structure study in hydraulics, pneumatics, electrical, material testing, sensors, electric and pneumatic robot operations, and an introduction to programmable logic controllers, measurement, and materials characterization. A work-based learning component is provided.

#5
Quality Assurance Concepts and Techniques: Students will learn concepts of maintaining quality and implementing improvement processes while ensuring that these processes lead to products and meet quality standards. Students will learn the use of audits and inspections to maintain quality. Students will learn to use metrology, materials characterization and statistical process control as used in the manufacturing industry. This course includes content related to conducting an in-depth investigation to identify customer needs, verifying that needed resources are available, setting up production equipment, using process control data, inspecting the product, documenting product and process against customer requirements, and checking for specified quantities and proper documentation to prepare a final product for shipping or distribution.

#6
Safety in the Workplace: Students will develop in-depth skills for maintaining a safe and productive environment including following regulations to perform inspections, participate in emergency response teams to perform emergency drills, identify unsafe conditions and take corrective actions, and provide a safety orientation to train other employees in safe practices and emergency procedures. Students will ensure that equipment is being used safely in the workplace by training others to use equipment safely; by suggesting processes and procedures to support safety; by fulfilling safety and health requirements for maintenance, installation and repair; and by monitoring equipment and operator performance to assure workplace safety and compliance with both company and national regulations.

#7
Problem Solving and Teamwork: Students will solve problems and coordinate work teams to produce products. This will include providing training to other employees, setting team goals, making job assignments, using innovation and design skills, and coordinating work flow with team members and other work groups. Students will learn procedures necessary to produce a product to satisfy customer desires.
